

# MAINTENANCE

**Routine Maintenance of machinery is vital but is the one part that is easily overlooked due to costs, time and operator training.**

**Train your operators to perform routine maintenance checks.**

**Don't be pennywise but pound foolish !**

In the above example, a \$5 Gasket was all that was required to avert this issue.

Instead the gasket was left unchanged which caused a hole in the coupling. The operator continued to blast disregarding the hole sending both media and air directly into the underside of the blast pot creating a hole in the pot that was unable to be fixed

Needless to say a \$5 gasket would have been preferable to the cost of a new blast pot.

**For any Servicing needs, please call our office**
