

Dust Collection

No Matter what dust you make We've got you covered !

Single Cartridge Dust Collector

- Designed for the smaller application
- An Auto Reverse Pulse Dust Collector that uses a pulse-jet of compressed air to clean the cartridge filters. Allowing for high dust collection efficiency and a longer life expectancy for the cartridge filters
- Uses pleated cartridge filter elements that are encased on an all metal rigid housing.
- Sealed dust collection bins are included for easy removal and clean out

Gold Series

- Modular design dust collector provides optimum field flexibility
- Vertical design of the filter cartridges provides more efficient pulsing of dust, eliminating uneven dust loading
- The channel baffles installed in the inlet protect the filters from incoming dust and separate the larger particles directly into the hopper, reducing the load on the filters
- Multiple filter media and pleat spacing options are available to best suit your specific application and dust.
