

Did you know

A Shot gun Pallet has 28 grams of shot
Below is a picture of a sign shot with a shot gun pellet
and the damage caused.

Now think about it in terms of Shot Blasting.
Our smallest Turbine machine the GW18 machine throws
100kgs of shot per minute, which is the equivalent of 3,571
shot gun shells.

With this in mind, it is easy to see that with any type
of Abrasive Blasting, maintenance is the key to a well
running machine
