

ABSS Dustech 500CFM

Reverse Pulse Dust Collector

The *ABSS Dustech* Single Cartridge Dust Collector is a 500CFM free standing unit perfectly sized to suit most standard Abrasive Blast Cabinets in the ABSS range as well as small collection requirements. Also suitable for some non-ABSS Blast Cabinets.

The *ABSS Dustech* 500CFM is a “Reverse Pulse” style of Dust Collector that uses a pulse-jet of compressed air to clean the cartridge filter. This feature allows for an extremely high dust collection efficiency and a longer life expectancy for the pleated cartridge filter.

The activation of the “Reverse Pulse” is by either a Manual Control or with an Electronic Pulse fully adjustable Activation Control Unit. High quality, fully balanced fan and motor is selected to suit the specific duty.
